Quantifying lightning as source of prebiotic molecules

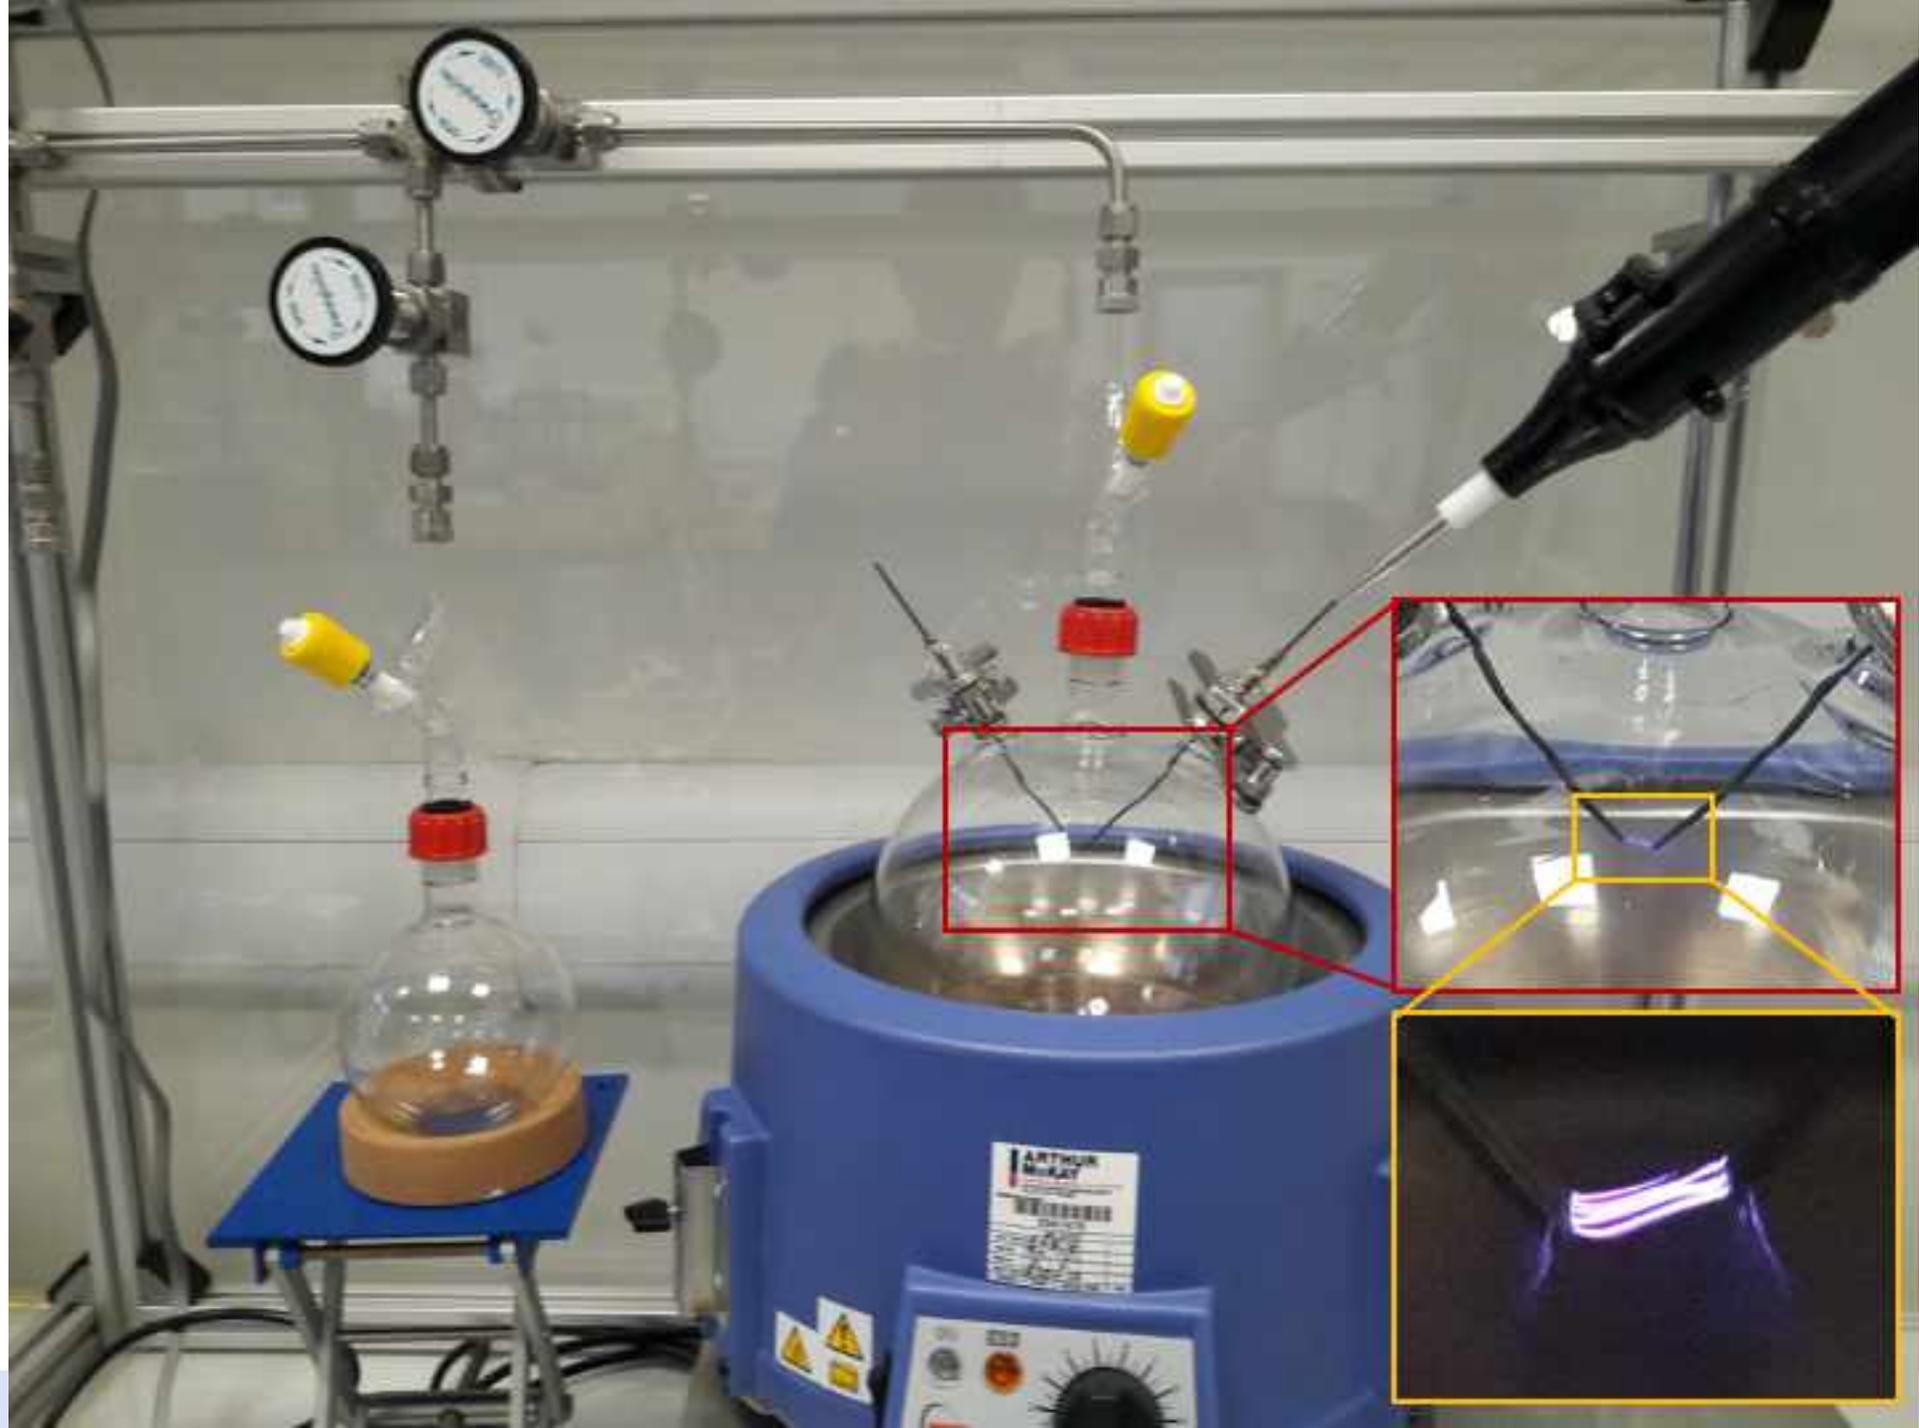

Patrick Barth (He/Him)
School of Physics and Astronomy
School of Earth and Environmental Sciences
Supervisor: Christiane Helling & Eva Stüeken

Novo Nordisk Meeting
24th July 2020

Miller-Urey experiment (1952)

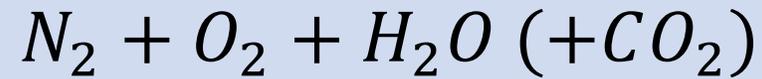

➔ More than 20 different amino acids produced

Nitrogen Fixation:

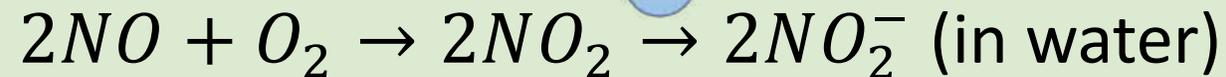

Start with:

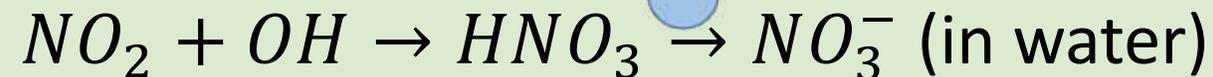

Nitric oxide:

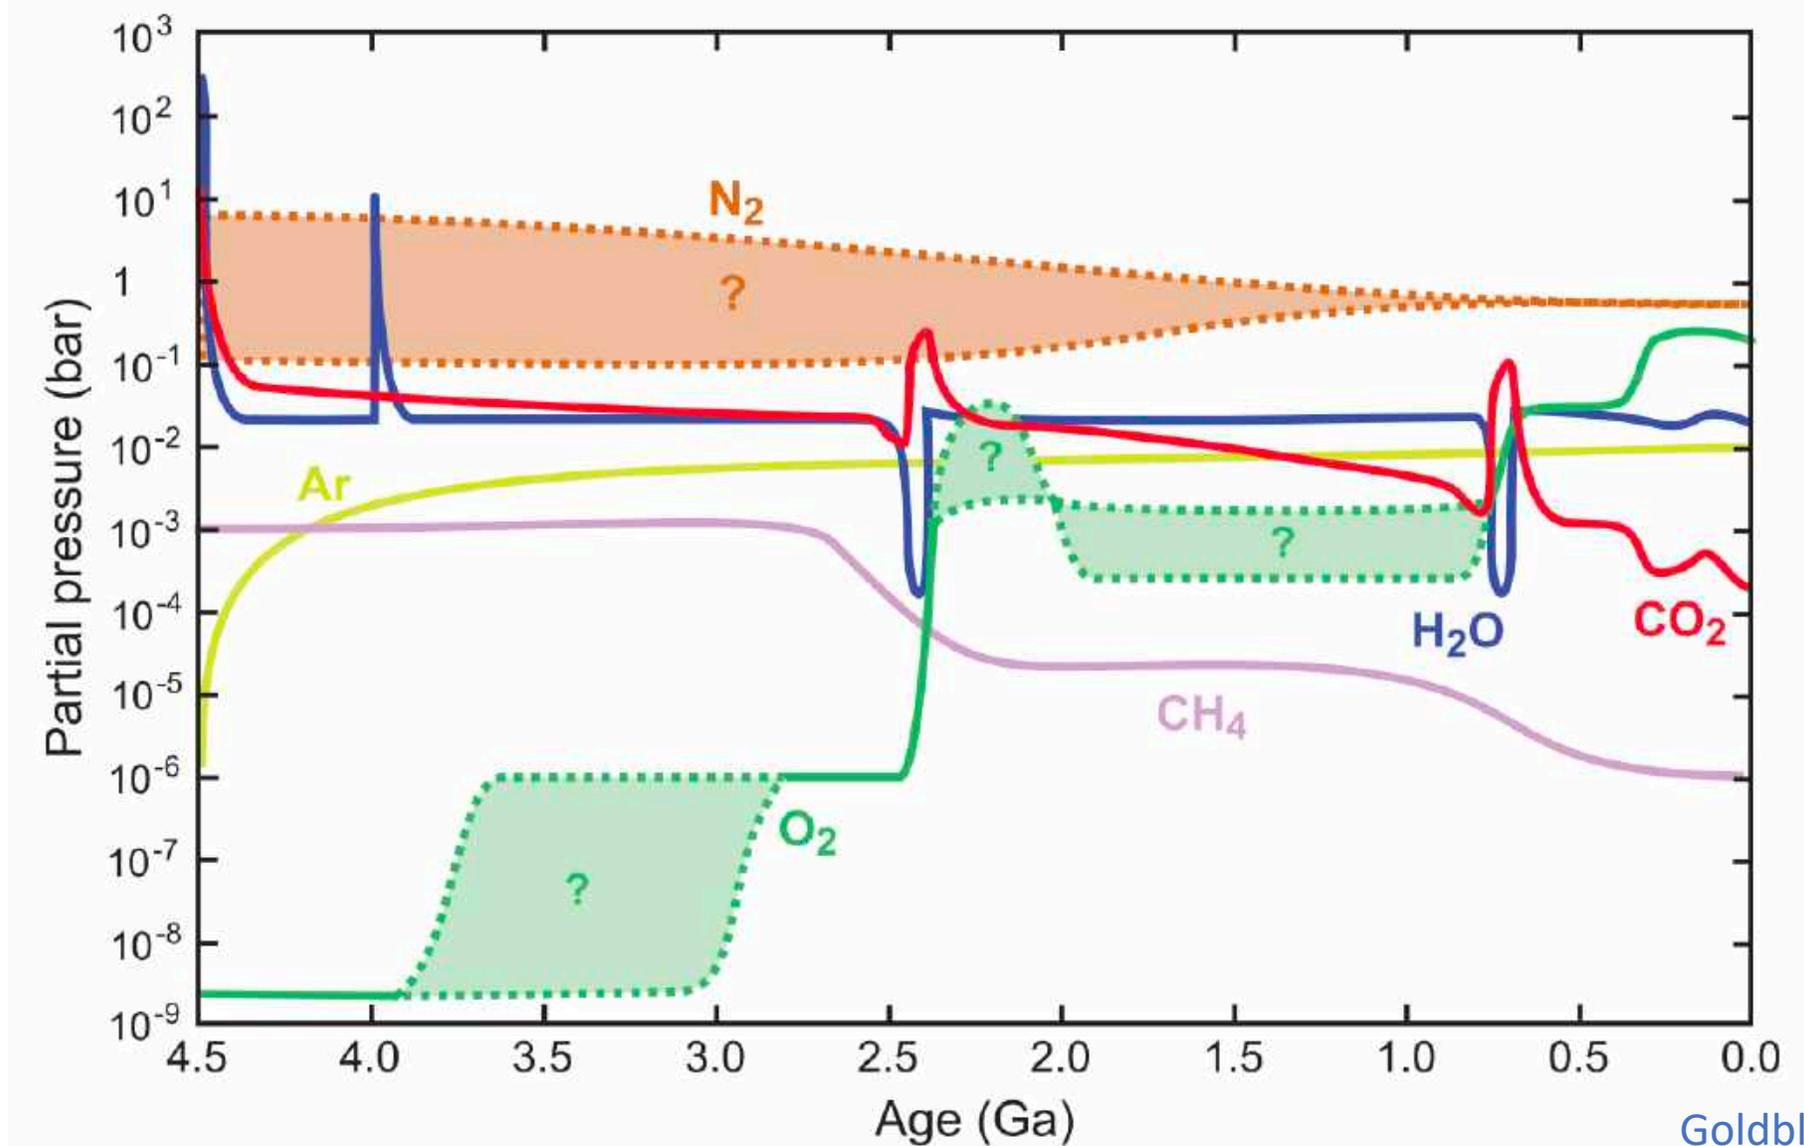

Nitrite:

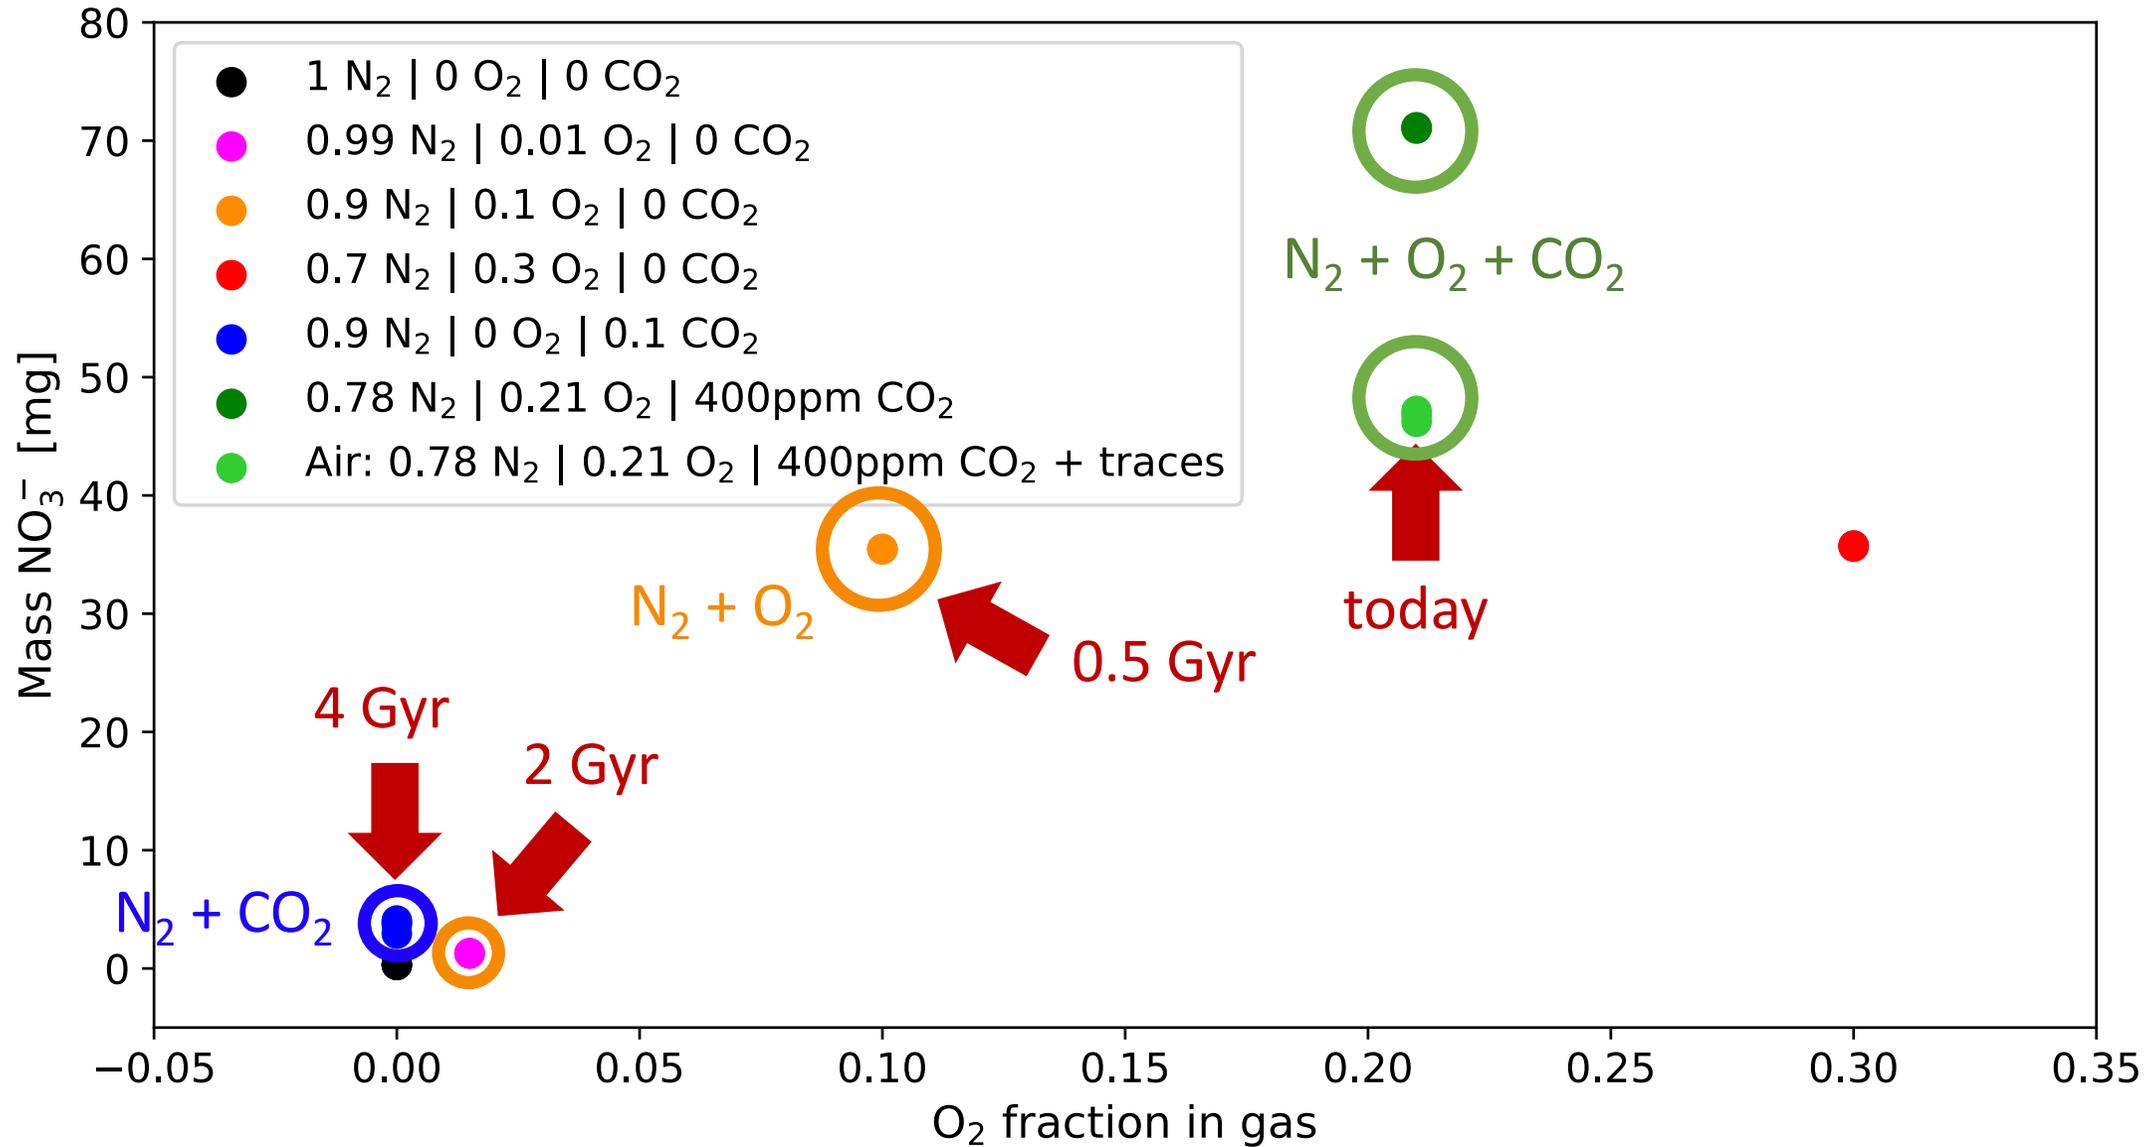

Nitrate:

History of Earth's atmosphere

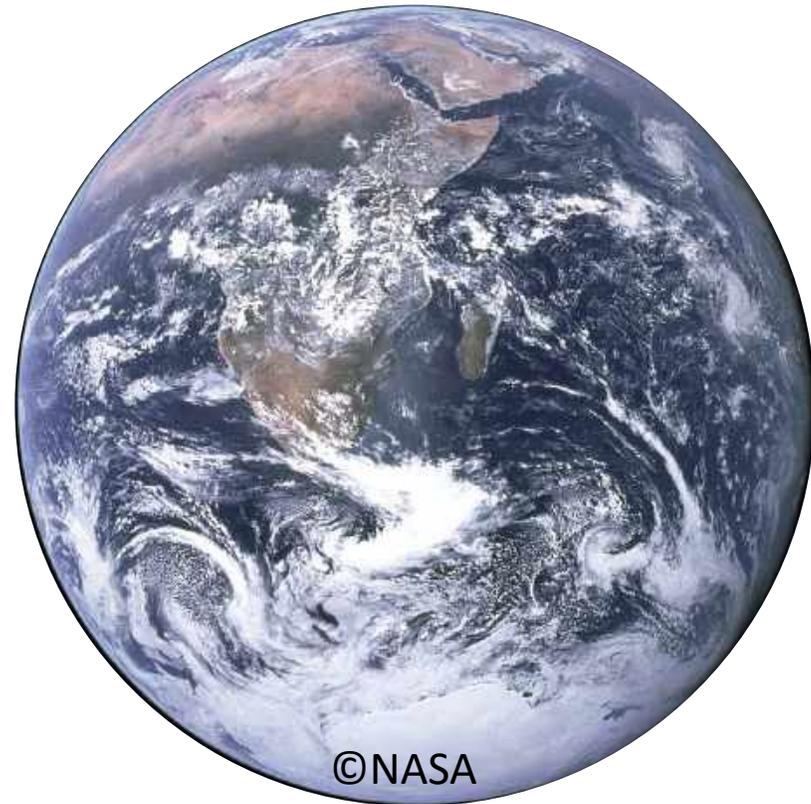

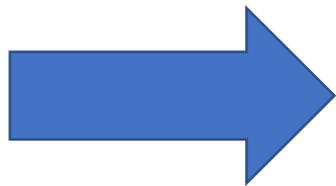

Nitrate production during history of Earth's atmosphere

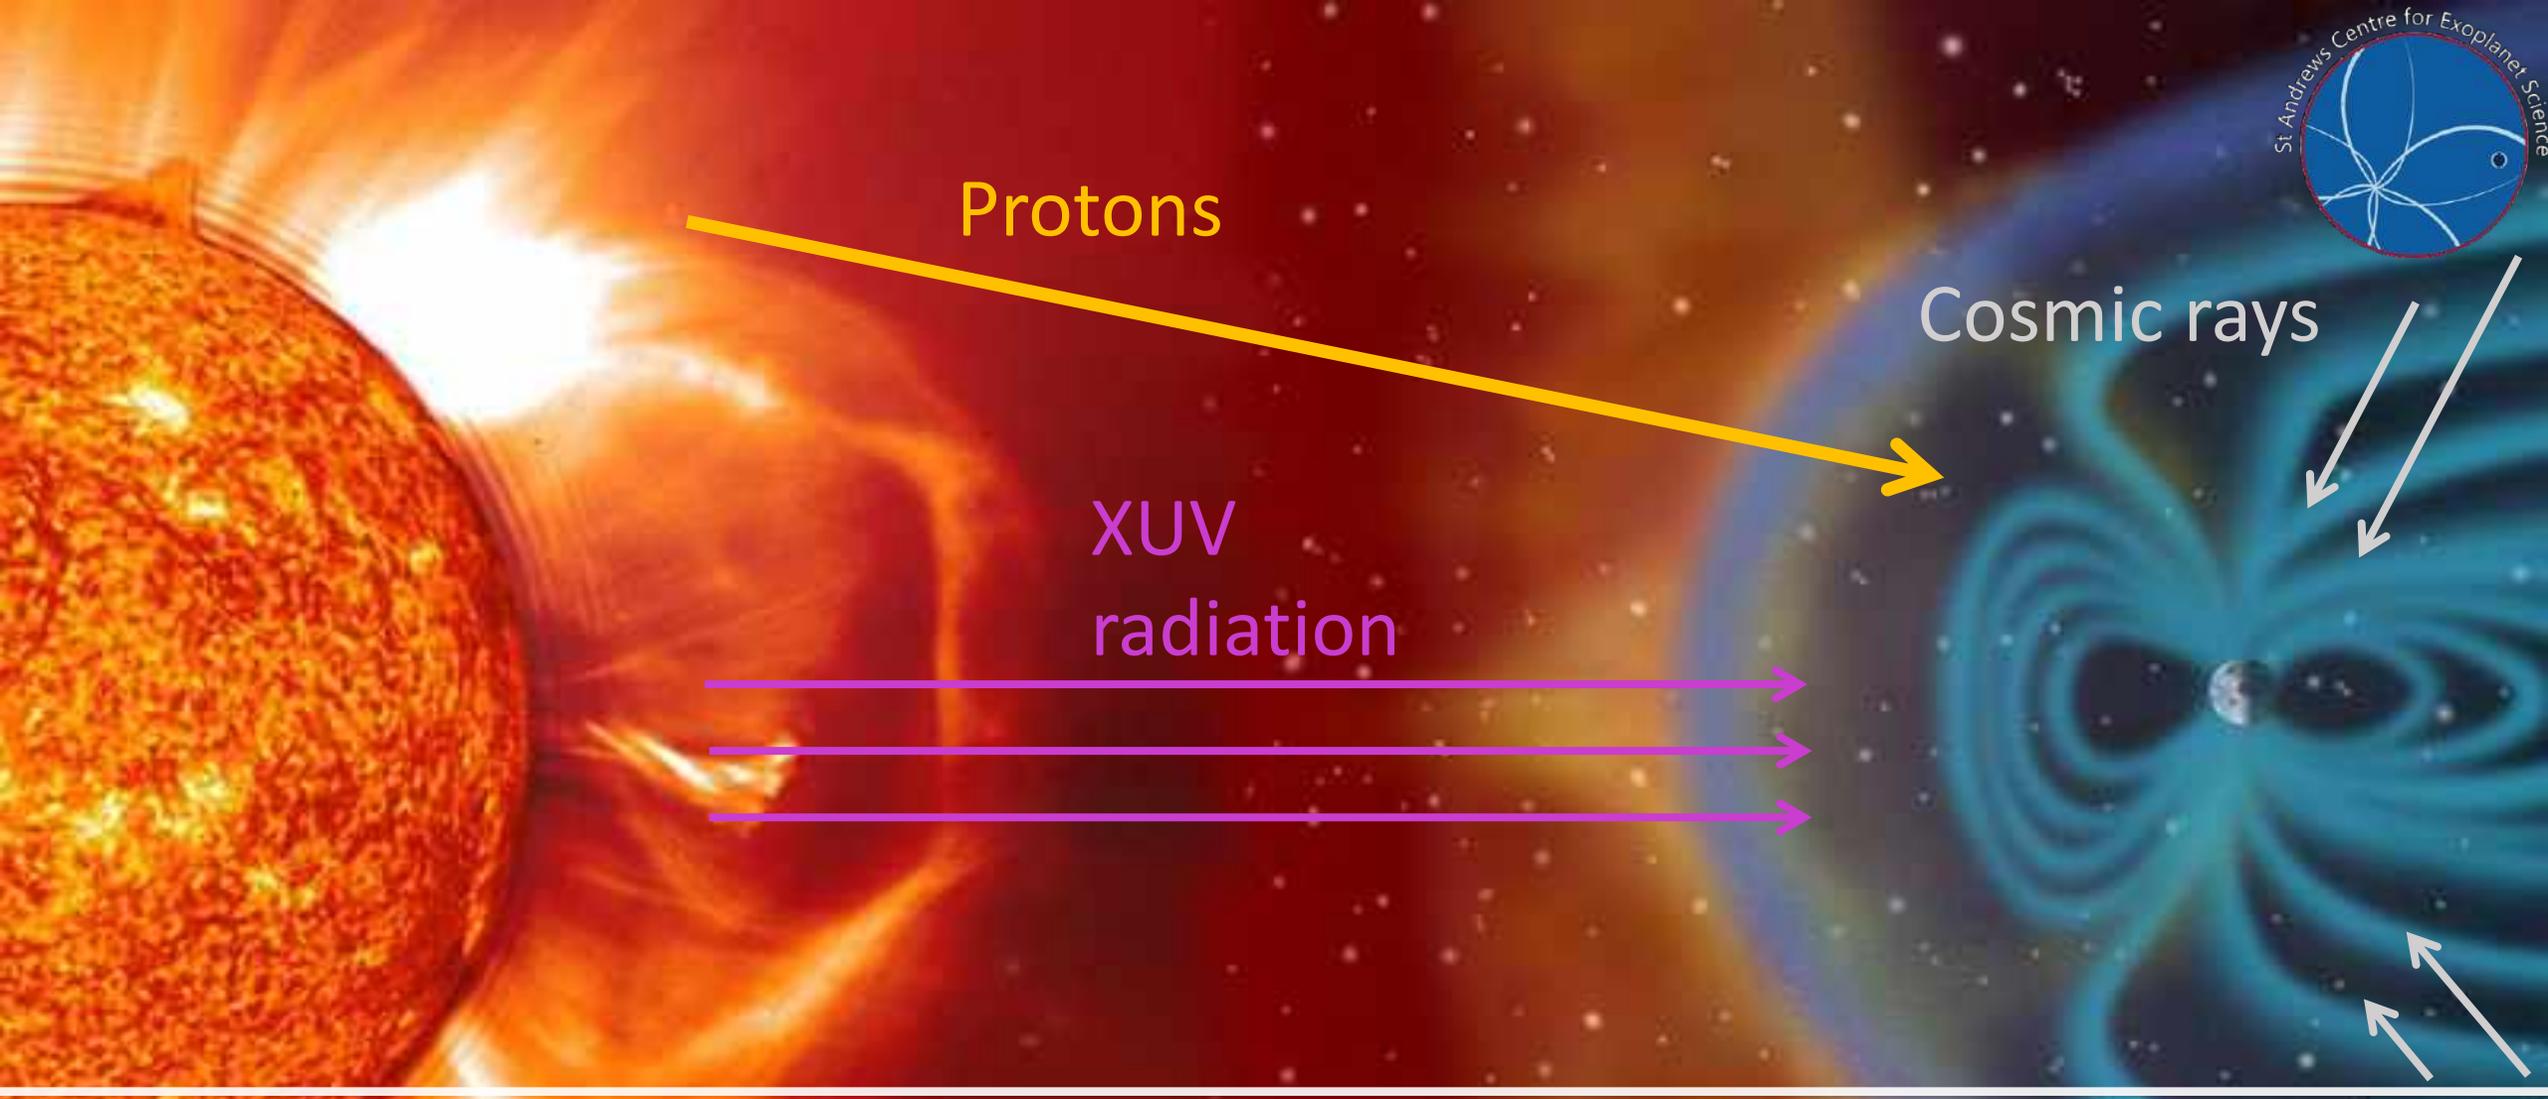

Problem: Scale

~ 20 cm

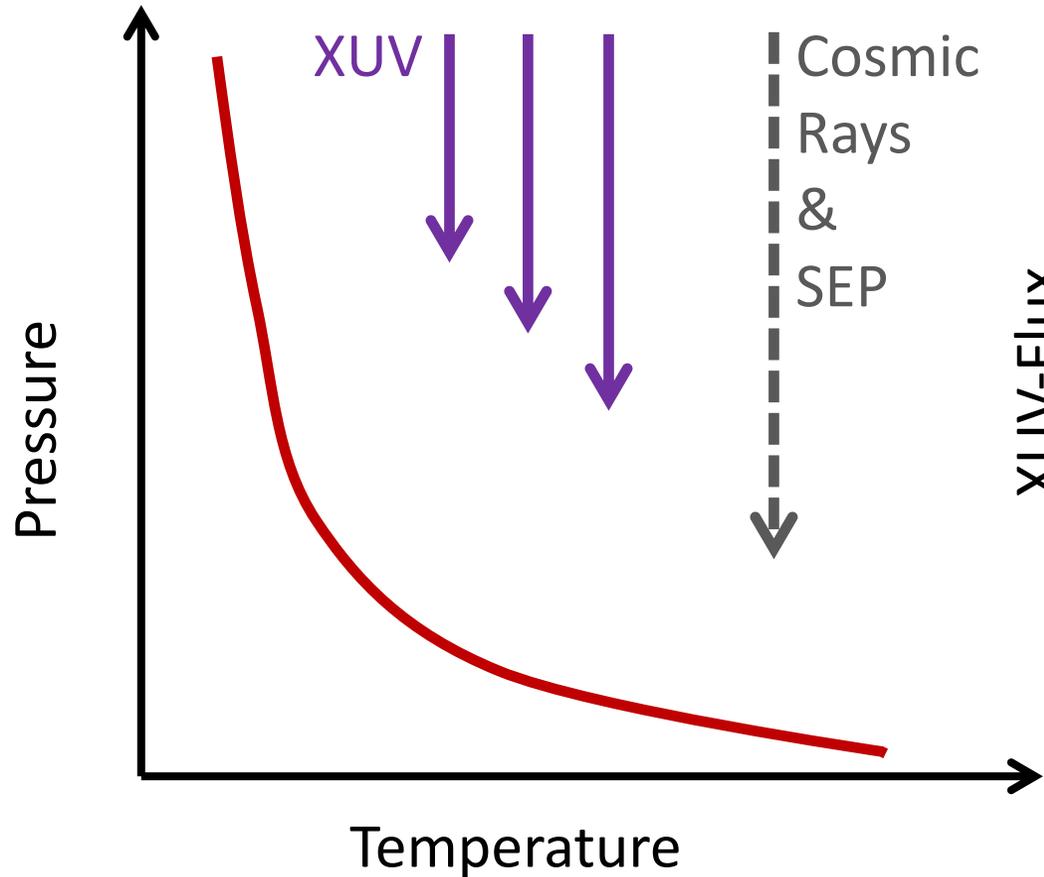

~ 12,000 km

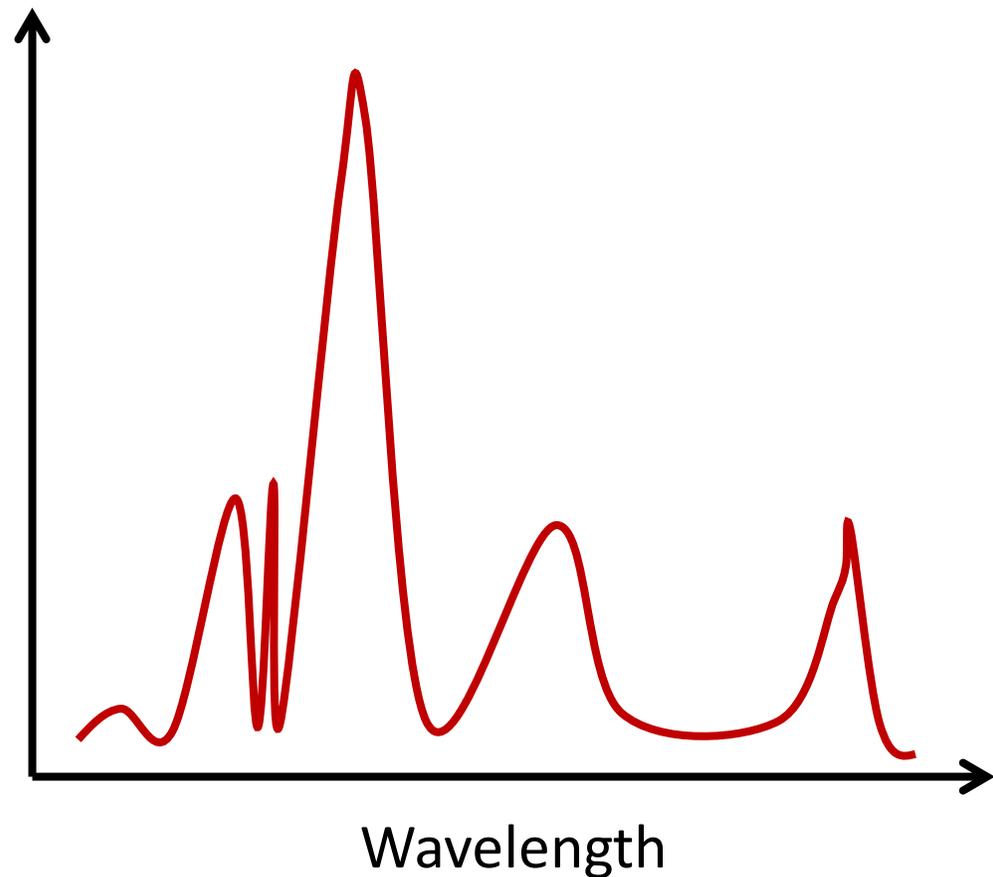

High-energy radiation

Ionization rates for different processes

Ionization rates for different processes

Prebiotic molecules:
Amino acid
Glycine
($C_2H_5NO_2$)

Conclusion

- Nitrate production increase with oxygen abundance
- CO₂ possible oxygen source for nitrate in early Archean
- Energy input needed for prebiotic molecules
- XUV/SEP/CR: important energy source for prebiotic chemistry
- Tracer for SEP/CR ionisation: NH₄⁺, HCN

Outlook

- Reproduce nitrate production experiments
- Measure nitrogen isotope fraction
- Include lightning in model
- Add aqueous chemistry
