

Two-minute meeting 2011

Scientific Group Activities

- Seminars (Organizers: Emil Bjerrum-Bohr, Donovan Young)
- Journal club (Organizer: Ricardo Monteiro)
- PhD meetings (Organizers: Agnese Bissi, Jakob Gath)

Group secretary:

- Anna Maria Rey (Tue-Wed-Thu) in FB8A.

(F-building is the building of the canteen, B first floor, C second floor)

Utility items

- “Lounge” FB6 for discussions, journal club, other social activities, coffee
- Two group bikes (Pick up the key and note your name on the sheet in the kitchen of the FC floor).
- Group homepage, face-book page, mailing lists (→ Costas Zoubos)

New group members since last meeting

- Postdocs: Andrzej Görlich, Jelle Hartong, Florian Löbbert, Guido Macorini, Valery Yundin, Yang Zhang
- PhD students: Hjalte Frellesvig (NBI), Lisa Glaser (Aachen/Imperial), Ara Martyrosian (Yerevan), Yuki Sato (visiting from Nagoya University)
- Master students: 15 in total

Upcoming events

- The 28th Nordic Network Meeting on “Strings, Fields and Branes” at NORDITA, Stockholm Dec 1–3. (Registration deadline: Nov. 15)
- Northern String Theory Meeting, Feb. 20-21 at NBI (To be announced)

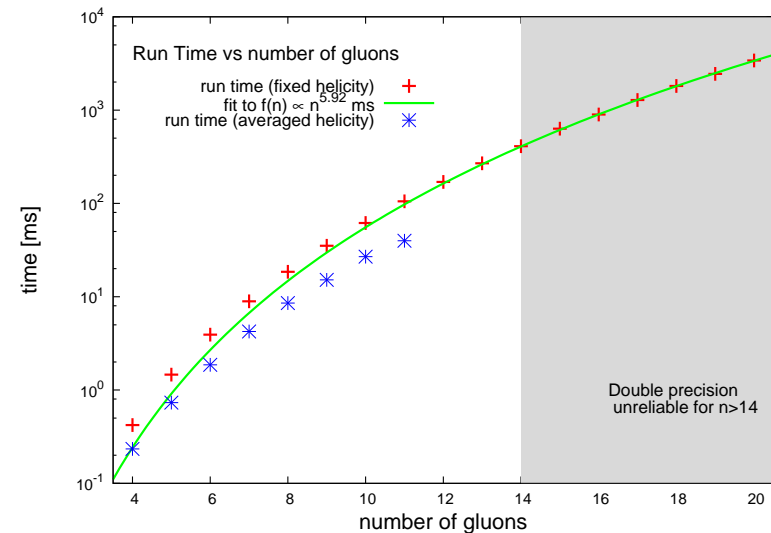

Simon Badger

- NBIA & Discovery Center
- Precision predictions for SM backgrounds at the LHC
- Multi-leg amplitudes at Next-to-Leading Order
 - Analytic computations for massive amplitudes
 - Numerical codes for multi-parton amplitude in QCD : `NGluon`

- Generalised Unitarity approach
- Recursions relations for tree-level ingredients
- Polynomial growth with external legs
- Applications to multi-jet rates at the LHC

Holger Bech Nielsen:

- ▶ (New) String Field Theory Second quantizing strings in a way letting right and left movers on the string be described as separate (existing) entities. With M. Ninomiya.
- ▶ What is so Special about the Standard Model Group? We seek to invent a game in which the Standard Model Gauge Group would get the highest score. With D. Bennett.
- ▶ How can Space time be Flat? Need for spontaneous breaking at sub-Planckian distances of translation invariance(“Guendelmann variables”). H. Kleinerts crystal with defects gravity model. With D. Bennett.
- ▶ Plebanski-Kleinert The Kleinert crystal of foregoing project is connected to Plebanski’s gravity formulation. With L. Laperashvili...
- ▶ Tunguska, Dark Matter The Tunguska event hundred years ago were a ball of dark matter shut deep into the earth; hot earth material were ejected through a “Kimberlite”. With C. D. Froggatt

Agnese Bissi

- I am PhD student, under the supervision of Charlotte.
- I am interested in integrability in gauge and string theory.
- I am coorganizing (with Jakob) PhD meetings. If anyone wishes to give an elementary talk...is very welcome!

Two-minute presentation.

High-Energy and Cosmology Group

Name: Emil Bjerrum-Bohr, NBIA/HET

Research Interests:

Analytic properties of amplitudes in field theories

Relevant for understanding the physics and phenomenology in and beyond the Standard model.

New breakthroughs in understanding

Computations of amplitudes

- Yang-Mills / QCD
- Gravity
- string theory
- twistor / helicity methods
- new symmetries

Quantum gravity / gravity as an effective field theory.

Poul Henrik Damgaard

Current research interests:

- QCD amplitude calculations
- QCD in a finite box in the chiral limit
- Fluctuations and statistics of multiplicity distributions in $p - p$ and heavy ion collisions

Interested in moving more towards:

- Astroparticle physics and cosmology
- Particle physics phenomenology (data!)

High energy scattering of a closed string on a stack of N D_p branes

Paolo Di Vecchia

With G. D'Appollonio, R. Russo and G. Veneziano,
JHEP 1011 (2010) 100.

High energy scattering on a stack of N Dp branes

- ▶ Study the properties of a stack of N Dp branes from the scattering of a high energy massless particle as a function of the impact parameter b , the energy E , the string length $\sqrt{\alpha'}$ and the curvature of the background R_p .
- ▶ Curved space-time emerges from string amplitudes computed in flat Minkowski space-time.
- ▶ The scattering amplitudes diverge with the energy and unitarity is restored by a re-summation of loop diagrams.
- ▶ In this way one can construct eikonal operator.
- ▶ From it one gets the correct deflection angle of a massless particle moving in the background generated by the Dp branes plus string corrections (tidal excitations).
- ▶ These results are recovered by studying a classical string in the background generated by the Dp branes at large impact parameter.

Thomas Døssing – current research projects

Sonoluminescence: (with Mogens Levinsen)

Investigate competing theories of the emission of light from the compressed heated gas in the collapsed bubble:

bremsstrahlung – bound-free molecular transitions – line broadening – black body radiation

Working on bremsstrahlung calculation with coherent multiscattering – promising first results.
Next steps: multiscattering of electrons with realistic mixture of ions and atoms – evaluate mean free path of light in bubble

Vibrations of neutron rich nuclei (with Christina Losa et. al)

Accomplished consistent description of vibrations for axially deformed nuclei, Including all terms of the Skyrme interaction. Possible next steps: extend to nuclei in a neutron gas in the crust of neutron stars.

Name: Hjalte Frellesvig

Title: PhD-student (start Jan. 2011)

Affiliation: NBIA and Discovery Center

Advisors: Poul Henrik Damgaard and
Simon Badger

Research: Field theory, Scattering
amplitudes, Generalized
unitarity.

2 min presentation

27 oct. 2011

Jakob Gath

PhD student, supervisor Niels Obers

Research interests:

Gravity; The phase structure and dynamics of higher dimensional black holes.

Current research:

- Generalizations of the blackfold method to adS.
- Constructions using matched asymptotic expansion.
- Blackfolds in non-trivial backgrounds.

Lisa Glaser

PhD Student with Jan Ambjørn,

Causal Set

Causal Dynamical Triangulation

I like **discrete** Spacetime ...

Lisa Glaser

PhD Student with Jan Ambjørn,

I like discrete Spacetime and **smooth** whisky

Quantum gravity

Causal Dynamical Triangulations in Four Dimensions:

- Emergent 4D background geometry
- Quantum fluctuations
- Numerical simulations - Monte Carlo method
- Matter fields

Random matrix theory

Relation between the eigenvalue spectrum of covariance matrix and its estimator for a class of non-Gaussian random matrices.

Quantum computing

Description of quantum gates (*NOT*, *CNOT*) based on *SQUIDs* with emphasis on quantum decoherence.

Martin Hansen

Anomalies in the Cosmic Microwave Background

Examples of anomalies in the CMB:

Alignment of quadru- octupole

The Cold Spot

Parity Asymmetry

$$\Delta T(\theta, \phi) = \sum_{l=0}^{\infty} \sum_{m=-l}^l a_{l,m} Y_{l,m}(\theta, \phi)$$

Even and odd l does not carry same amount of power.

Figure on the right is the ratio between the power in even and odd multipoles. Odd multipole preference for low multipoles.

Red = ILC map, Black = cut sky

Current research activities:

- ▶ Fefferman–Graham expansions for Schrödinger space-times in collaboration with Matthias Blau and Blaise Rollier.
- ▶ Constructing analytic Lifshitz black hole solutions in $\mathcal{N} = 2$, $D = 4$ supergravity in collaboration with Wissam Chemissany and Bert Vercoocke.
- ▶ Deriving the NSVZ beta function from anomaly matching in $\mathcal{N} = 1$ SYM in collaboration with Nicola Ambrosetti, Daniel Arnold and Jean–Pierre Derendinger.

Other research interests:

- ▶ holographic renormalization for non-relativistic holography
- ▶ blackfolds
- ▶ attractor mechanism

Research Interest

- Current Interest :
 - Analysis of CMB data
 - Statical anisotropy of early Universe
 - Physics at very large scales
- Future Interest :
 - Local anomalies in CMB data (Topological defects)

Jaiseung Kim

- Integrability in the AdS/CFT correspondence:

The spectral problem of $\mathcal{N} = 4$ SYM, ABJM and ABJ theory, integrable spin chains and their Bethe equations, Wilson loops, giant gravitons, amplitudes

- Beyond integrability of the AdS/CFT correspondence: Nonplanar effects, three-point functions

- Discrete models of quantum gravity, matrix models, coloring and folding problems.

Phenomenology

- electroweak physics at LHC
- NLO e.w. corrections, "complementary" to NLO QCD
- background process, SM and search for NP
- Single top, MSSM Higgs + b jet, Top+ H^+

Integrability in AdS-CFT

- TBA/Y-system to compute anomalous dimensions in $N = 4$ SYM
- weak coupling wrapping effects, $sl(2)$ sector and beyond
- strong coupling semiclassical string analysis, algebraic curve

ARA MARTIROSYAN

- . I have done my Bachelor and Master at Yerevan State University (YSU) and wrote a master thesis under supervision of Ara Sedrakyan***
- . My master thesis was mostly about graphenes***
- . I have started my PhD recently under supervision of Charlotte Kristjansen***
- . My research interests include relations between gauge and string theories as well as integrability in them***

Ricardo Monteiro - postdoc NBIA, 2010/13

Interests

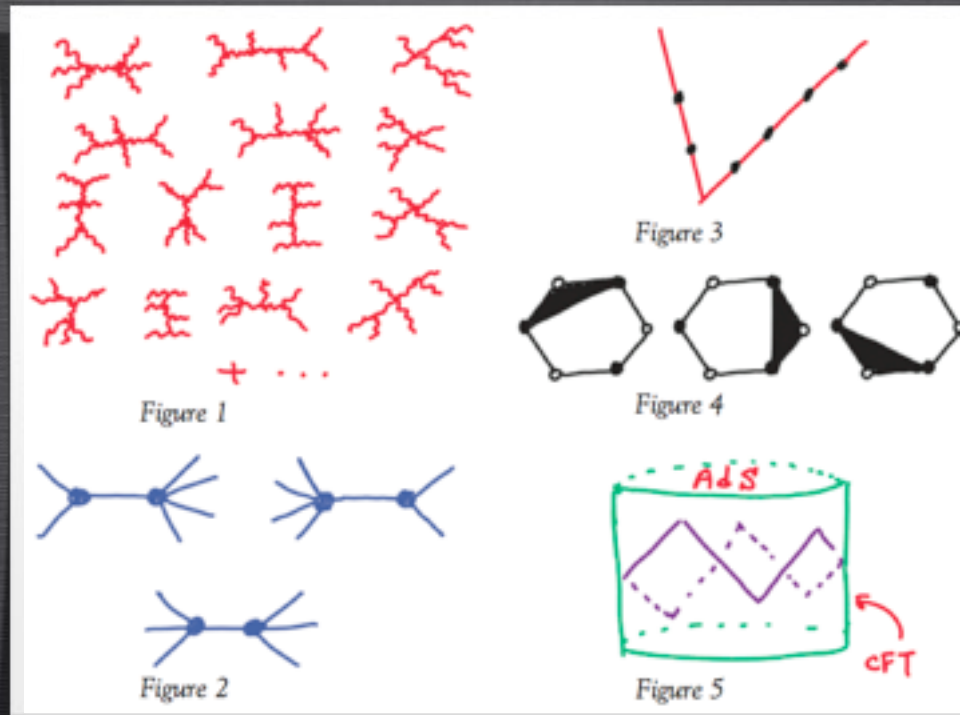

Black holes: phase diagrams (existence, stability) in higher dimensions / AdS, also fluid-gravity correspondence

Gauge-gravity correspondence (AdS/CFT): CFT correlation functions from string solutions in AdS, also “applications”

Scattering amplitudes: squaring relations between gravity and gauge theory amplitudes, hidden algebraic structures

Donal O'Connell

NBIA Postdoc

Structure of Amplitudes in QFTs
LHC phenomenology

Research interests, Niels Obers (2 min. meeting 2011)

Blackfolds: black hole physics in **higher-dimensional gravity** and **string theory**

- black holes as “fluids” and “materials”
- (extremal) charged black holes in string theory/M-theory
- time-dependence + stability
- higher-order corrections

Aspects of the **AdS/CFT correspondence**

- thermal Wilson loops (thermal probes using BF)
- thermal Giant Gravitons
- fluid/gravity correspondence
- Lifshitz black holes and holography
- Nernst branes in gauged supergravity
- other holographies: Kerr/CFT, higher-spin...

Scattering amplitudes in gauge theory and ST

- amplitudes in curved backgrounds (pp-wave, CFTs, AdS ?)
- non-perturbative effects and U-duality

With:

Troels Harmark (Nordita), Jelle Hartong, Ricardo Monteiro, Marta Orselli, Costas Zoubos

Rutger Boels (DESY), Joan Camps (Durham), Vasilis Niarchos (Crete), Gianluca Grignani et al (Perugia), Gabriel Lopes Cardoso (Lisbon), Michael Haack et al (Munich)

Jay Armas, Jakob Gath Andreas, Vigand Pedersen (PhDs)

Gabriele Conti, Jakob Lorenzen, Heidar Moradi (MsC)

(NBIA + NORDITA)

NEUTRINO PROCESSES IN DENSE MATTER.

HOW DO SUPERNOVAE WORK?

NEED BETTER RATES

CHIRAL EFFECTIVE FIELD THEORY (CEFT)

BETTER MODELS OF NEUTRON STARS

USE CEFT FOR LOW DENSITIES
(LOTS OF OBSERVATIONS)

INTERACTION OF GRAVITATIONAL WAVES

WITH MATTER ↙ MATTER

+ A. CETOLI arXiv: 1110.0408
MAKE GRAVITY LOOK LIKE ELECTROMAG.

BAND STRUCTURE OF NEUTRONS IN NEUTRON

STAR CRUSTS

WHAT IS THE FERMI SURFACE LOOK LIKE
WHEN THERE ARE UP TO 500 BANDS?

+ PHYSICS OF nEDM EXPERIMENT

sa to yu ki
Name: Yuki Sato (佐藤 勇貴)

Affiliation: PhD student @ Nagoya Univ.

Adviser (here): Prof. Jan Ambjørn

Interests: classical & quantum gravity,
matrix models and string theory

Current works: "CDT w/ a matter,"
"n-DBI gravity,"
"Ads/CFT"

Thomas Søndergaard

PhD Student at
Niels Bohr International Academy

Advisors:

Poul Henrik Damgaard

Emil Bjerrum-Bohr

Main research interest:

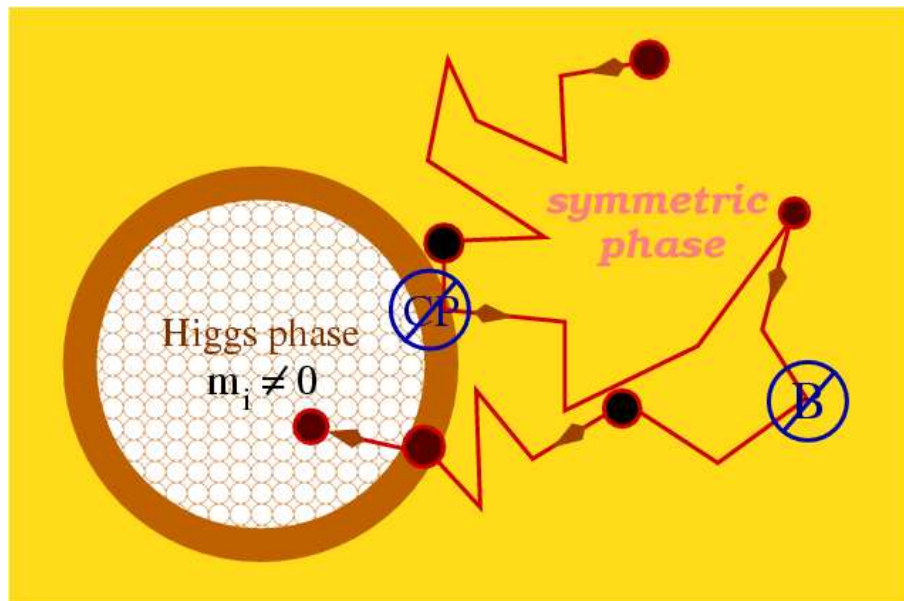

Structure and relations of scattering amplitudes
in quantum field theory, quantum gravity and
string theory.

Smile...

Anders Tranberg,
NBI, NBIA, Discovery Center
anders.tranberg@nbi.dk

- Physics of the very early Universe (> 100 MeV).
- Particularly (Electroweak) Baryogenesis ...
- ...but also Inflation, (P)reheating, Topological defects, Q-balls.
- Numerical simulations of classical and quantum field theory, including...
- ... lattice field theory, 2PI/in-in/Keldysh-Schwinger/CTP...

Andreas Vigand Pedersen

PhD student – started last year
Academic advisor: Niels Obers

Background: Master from NBI

Interests:

- Physics
- Gravity theories
- Higher dimensional gravity
- The AdS/CFT correspondence and applied AdS/CFT

Currently investigating:

- Various aspects/generalizations of the blackfold approach
- Blackfold constructions in AdS/CFT
- Numerical approaches to blackfolds

Donovan Young

My general interest is AdS/CFT and gauge-gravity duality in general.

Wilson Loops

- in $d = 4$: $\mathcal{N} = 4$, $\mathcal{N} = 2$ SYM
- in $d = 3$: ABJM, SYM with 16 supercharges

Techniques include: matrix models (localization), straight-up perturbation theory, finding minimal surfaces and D-brane solutions, calculating correlation functions with local operators and other loops.

Gauge-Gravity in Three Dimensions (with Abhishek Agarwal)

- Theories with 16 supercharges: PWMM, SYM on $\mathbb{R} \times S^3$, SYM on $\mathbb{R} \times S^2$.
- Integrability
- Protected Wilson loops
- Scattering amplitudes

Valery Yundin

Research interests

- ▶ Multi-leg NLO corrections to Standard Model
- ▶ Methods for evaluation of loop integrals
- ▶ Automation in particle physics research

Yang Zhang

Postdoc in NBIA & Discovery center

coming from Ithaca, NY...

Scattering amplitude: BCJ, KLT relations

String theory: heterotic string theory, throat geometry

Cosmology: quantum tunneling, cosmic string

Konstantinos (Costas) Zoubos

My Scientific Trajectory (so far):

- BSc '97 U. of Patras, MSc '98 Imperial College London
- PhD '04 Stony Brook, NY, USA
- Postdoc '05-'07 at Queen Mary, University of London
- At NBI since October 2007

My Research Interests:

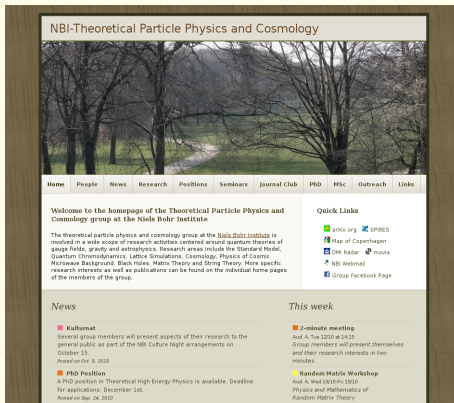

- Integrability (and its breaking) in Gauge and String Theory
- Finite Field Theories in $D > 2$ (Hidden symmetry?)
- Amplitudes in Gauge Theory (e.g. MHV lagrangian)
- Mathematical aspects of AdS/CFT (Conformal geometry)
- Wishlist: M-theory (e.g. fivebranes), AGT, RR backgrounds (pure spinors?), CFT, 3d gravity, Wall-crossing...

Other Roles in the Group:

- Involved in various workshops, teaching, outreach...
- Co-maintaining the Group website (mainly news and member pages)

Home People News Research Positions Seminars Journal Club PhD MSc Outreach Links

Welcome to the homepage of the Theoretical Particle Physics and Cosmology group at the Niels Bohr Institute

The theoretical particle physics and cosmology group at the Niels Bohr Institute is involved in a wide scope of research activities centered around quantum theories of gauge fields, gravity and astrophysics. Research areas include the Standard Model, Quantum Chromodynamics, Lattice Simulations, Cosmology, Physics of Compact Microwave Background, Black Holes, Matrix Theory and String Theory. Here specific research interests as well as publications can be found on the individual home pages of the members of the group.

News

- Kulturnat**
Several group members will present aspects of their research to the general public as part of the NBI Culture Night arrangements on October 15.
Posted on Oct. 8, 2010
- PhD Position**
A PhD position in Theoretical High Energy Physics is available. Deadline for applications: December 1st.
Posted on Sep. 24, 2010

This week

- 2-minute meeting**
Wed A, Tue 12:10 to 14:15
Group members will present themselves and their research interests in two minutes.
- Random Matrix Workshop**
Wed A, Wed 12:10 to 13:10
Physics and Mathematics of Random Matrix Theory

- Please check your personal page and send me any corrections.
- Comments and suggestions are welcome!
- Whoever wants to get involved is even more welcome!!

The group facebook page

The screenshot shows the Facebook interface for the group "NBI-Theoretical Particle Physics and Cosmology". At the top, there is a blue navigation bar with the Facebook logo and login fields for "Email" and "Password". Below the navigation bar, a "Sign up" button is visible. The main content area features a profile picture of a building, the group name, and navigation tabs for "Wall", "Info", "Photos", and "Discussions". A "Like" button is also present. The "Wall" section contains several posts, including one about an upcoming meeting in Göteborg and another about a Nordic Network Meeting. A sidebar on the left provides information about the group's location in Copenhagen and lists members who like the page.

- Can be accessed without a facebook account
- Could be used for sharing interesting links (online talks, conferences, articles), pictures from group events etc.

The group mailing lists

- We have recently introduced several mailing lists for different subsets of the group members
 - ▶ `het-seminars@nbi.ku.dk` All group members, but also **non-members** who might be interested in the group's seminars, journal clubs, workshops etc. Widest possible list (contains `all.gen.teor@isis.ku.dk`)
 - ▶ `hetcosmo-all@nbi.ku.dk` All group members and long-term visitors (but not master's students!)
 - ▶ `hetcosmo-staff@nbi.ku.dk` Permanent group members
 - ▶ `hetcosmo-postdocs@nbi.ku.dk` Postdocs, long-term staff
 - ▶ `hetcosmo-phd@nbi.ku.dk` PhD students
 - ▶ `hetcosmo-msc@nbi.ku.dk` Master's students
 - ▶ `hetcosmo-guests@nbi.ku.dk` Current visitors and guests
 - ▶ `hetcosmo-alumni@nbi.ku.dk` Under construction
- Apart from `het-seminars`, any member of a list can post to that list.
- Suggestions for improvements are welcome!
